Name Ideas:

Collab, Scoutly, Beaver, Sproutly

Collab, Scoutly, Beaver, Sproutly

Overview:

- The app will be a platform for content creators, brand owners, artists, or essentially anyone building an online brand for themselves to use.
- Think **LinkedIn** but for creatives and Toronto based.

What problem am I aiming to solve?

- Starting out as a creator can be very intimidating, especially for someone without much of a social media presence already. **How do you get the ball rolling?**
- There are tons of people in Toronto who are creating social media content, creating businesses, creating music, and much more; but **how do you directly find out about these up and coming creators?**
    - Platforms like Instagram and TikTok are designed to push creators and content that are already gaining traction or are similar to content you're currently consuming; how do you find out about someone who is not as popular or **who you didn't know you were looking for?**
- For someone looking for models to model their clothes; other musicians to listen to their music; content creators to collaborate with; where do you find these people?
    - This is community testing.
    - This is proof of concept validation.
- **How do you hear about the latest social events for creators in Toronto**?
    - Instagram and TikTok and other social media platforms are useful for this, but their primary design is to entertain users with content and keep users connected with friends; wouldn't it be useful if there were an app specifically for connecting with other creators and finding out about creator events?
- How do you directly share your content with other creatives and gain a taste for what others in your field have to say about your work?
- Filter based on niches. Finding people within specific niches. -> add to features

Who is this useful for?

- Anyone who identifies as a creator.
- Business owners; clothing brands, online stores, barbers, hair stylists, chefs.
- Models
- Comedians, TikTokers, streamers, youtubers, content creators, instagram models

Why will this work?

- The main idea behind this app is to solve the problems listed above; solving these problems is the driving force behind this app's idea.
- The app is simple to download, simple to sign-up on, and easy to use. A frictionless product will have an easier time gaining traction.
- **Toronto Branding**: launching this product in one area only limits our potential user base. To me this is not a weakness, but a **strength**.
    - Marketing this app as a Toronto based app will tap into a sense of pride and community for Toronto. Users will not only come to this app to grow their own platform, but to support other creators within their city.

App Features

Users will be able to navigate to each of the following pages via navbar at the bottom of the screen (ordered from left to right).

Events/Posts Page (Home Page): any sort of event a user is hosting can be posted on the events page for other users to see and potentially attend/demonstrate interest in.

- Fashion shows, album listening parties, networking events, community events, etc.
- We can also use this page to host user posts eventually (any sort of content they would like to share).
- This page will have a scroll like ability.
- **Filter by niche option**
- Each event will have an "I'm interested" button and an "I'm going" button.

Creator Map: similar to Snapchat's SnapMap, this will be a map to browse events and creators within your city. The map will have two modes:

1. Event mode to browse events in your area.
2. Creator mode to browse businesses, creators, and artists in your area.

- **Filter by niche option** (niche persists between mode switch).
- **Filter by search option** (search persists between mode switch).

Create Page: page where a user can create an event/content post and upload it.

My Events Page: page where a user can manage the events they are currently registered to attend

1. Interested mode to see the events they're interested in attending
2. RSVP'd mode to see the events they're already attending

- We'll see event details, who's interested/going (see database table)

Account Page where a user can view and edit their own account profile, and view and edit the events they've posted.

- Users can either create a Creator page or a Business page.
- The account page will feature things like where the user is located, the type of business/content, years in business, links to other socials, niches they identify with, etc.
- We'll also show the users # of followers/following

Competitor Analysis (Similar Apps)

- **LinkUp app is the exact same thing (not Toronto based)**
- There are other apps with similar ideas, some branding themselves as "LinkedIn but for Creatives", but none that are Toronto based.
